What is OHP3D

- OpenGL PDF viewer
- for X11 and GNU/Linux
- keyboard and mouse control
- filters: GLSL shaders

Current status

- first public version
- based on ShaderShark and previous private prototype
- still bit raw, lots of missing features
- but displays PDF and applies shaders

Mouse controls

- previous page: click lower-left quadrant
- next page: click lower-right quadrant
- first page: click upper-left quadrant
- last page: click upper-right quadrant
- zoom: mouse wheel
- reset view: back
- exit: forward

Keyboard controls 1/2

- previous page: PageUp / j
- next page: PageDown / k
- first page: Home / u
- last page: End / i
- fullscreen: F11 / y
- reset: x
- exit: Esc / q

Keyboard controls 2/2

- move forward | backward: Up | Down / e | d
- rotate left | right: Left | Right / s | f
- rotate up | down: t | g
- roll left | right: w | r
